

MXA-82 FrSky 7Ch Bare Board

www.micronwings.com

The MXA-82 for FRSky radios combines light-weight with a full array of 7 channels. The board also has an incorporated bind button for ease of use.

Solder pads are supplied for the signal wire of each of the 7 channels. Pos and Neg are common for all servos so the Positive and Negative of each servo need to be combined and soldered to the board at the same locations as where the power is supplied.

Example Wiring Configuration

(for brushless motor setup with 4 channels)

Ch1 – Throttle

Channel Order

- CH1---AIL
- CH2---ELE
- CH3---THR
- CH4---RUD
- CH5---AUX1
- CH6---AUX2
- CH7---AUX3

Binding Process

1. Press the BIND button for 2 seconds on the receiver after the unit has been powered on. The receiver will enter bind mode (the slow blinking LED turns to a fast blinking LED)

2. Turn your transmitter on and put it into bind mode (refer to your transmitter manual). When binding is successful, the fast blinking LED on the receiver will turn to a slow blinking LED and then to a solid light as soon as a verified connection has been formed with the transmitter.
